Product Overview

NDS3542G encoder modulator is DEXIN's all-in-one devices which integrate encoding (MPEG-2) and modulation (DVB-C) to convert V/A signals into RF output. It has 4 CVBS input and 16 multiplexing channels, 16 scrambling channels and 16 QAM modulating channels, and supports maximum 1024 IP input through the GE port and 16 non-adjacent carriers (50MHz~960MHz) output through the RF output interface. The device is also characterized with high integrated level, high performance and low cost. This is very adaptable to newly generation CATV broadcasting system.
