

**NDS3105A**
**ISDB-T Multiplexer**

## Outline

NDS3105A ISDB-T multiplexer is a TS re-multiplexer developed to adapt Japan and those South American countries such as Brazil and Argentina. It supports 2 separate multiplexers which are fully complying with ISDB-T/Tb standard. This multiplexer can transfer the head-end single program and multi-program to ISDB-T/Tb standard TS as required. Additionally, it also supports PSI/SI table editing and generating, single frequency network and IIP packet editing and inserting. What's more, the NDS3105A ISDB-T multiplexer can support up to 12 channels input, 2 independent ASI output and 2 IP output, the transmission mode is compatible with hierarchy.

It is design with advanced management system which allows users to upgrade and control the multiplexer system online through network.

## Features

- Fully complying with ISDB-T/Tb standard
- PSI/SI rebuilding, editing and generating; descriptor data inserting

- Support accurate PCR adjusting
- Support PID filtering, re-mapping
- Support IP output over UDP protocol
- Support network remote upgrade
- Two separate channels TS re-Multiplexing
- Huge buffer, suddenly code stream resistance
- Support input 188/204Byte transmission stream packet
- Supporting hierarchy transmission, support SFN
- Support set transmission interval of PSI/SI table
- Support IP packet editing and generator
- Support LCD/keyboard and net management, support NMS/SNMP

## Specifications

<b>Signal inputting</b>	12 ASI input 188/204Byte transmission stream packet TS packet mode and suddenly code rate mode GPS 10mhz reference clock inputting GPS 1pps signal inputting
<b>Re-multiplexing</b>	2 separate channels TS re-multiplexer PCR accurate adjusting PSI/SI table automatically generating
<b>Modulation parameter</b>	Mode: mode1(2k) mode2(4k) mode3(8k) Guard interval: 1/4 1/8 1/16 1/32 Coding rate: 1/2 2/3 3/4 5/6 7/8 Constellation: DQPSK QPSK 16QAM 64QAM Layer: A A+B A+B+C Bandwidth: 6MHz 7MHz 8MHz
<b>SFN parameter</b>	Maximum time delay: 0ms - 1000ms Off set: -1000ms - +1000ms Device ID: 0 - 30
<b>Output</b>	2 ASI output(BNC) 2 IP output(UDP protocol) RS encoding output supporting
